Encrypt the entire drive (slower but better for PCs and drives already in use). Also, similar to the drive feature of the operating system, you will get the same additional options and a few more, among which are included: Add smart card: This option will allow you to configure a smart card to unlock the removable drive. Source: Windows Central In the "Operating System Drive" section, click the Enable BitLocker option. Source: Windows Central In Windows 10, if confidential files are saved on the device, it is crucial to take the necessary steps to protect them, and this is when BitLocker comes in handy. Once you complete the steps, the drive will start using encryption. How to enable BitLocker (software-based) on the operating system drive In case your computer does not have a Trusted Platform Module chip, you will not be able to configure BitLocker on Windows 10. Enable auto-unlocking: Instead of having to write a password each time you reconnect the removable drive, you can enable auto-unlocking to access the encrypted data without writing a password. Enter a password Ä requires a password before booting

on Windows 10 (recommended). To set up BitLocker To Go on a removable drive, follow these steps: Connect the drive to the device. In addition, the computer may take a while to complete its process depending on the storage size, but you can still use the computer. Save to a file. Open Start. Click the Next button. Source: Windows Central Select the encryption method to unlock: Insert a USB flash drive A requires a flash drive to unlock the device and boot on Windows. rekcoLiB, rekcoLiB ametsis ratuceJE n'Aicpo al evltcA, esipretnE y orP 01 swodniW ne elbinojsid /Atse rekcoLiB dadinu ed odarfiC IE .senoiccurtsni satsa rasu ed setna reconoc ebed euq sellated sonugla nartseum es n'Aicaunitnoc: A rekcoLiB rasu ed setnA If the device does not meet the requirements, BitLocker will create them automatically. Quick Tip: If you trust the cloud, choose to save the recovery key to your Microsoft account using the Save to your Microsoft account option. You can use these steps to configure it. Enable policy without TPM support To configure BitLocker on devices without a TPM chip, follow these steps. It is a special chip that allows the device to support advanced security functions. How to enable BitLocker To Go on Removable Drives As an alternative, you can also use the "BitLocker To Go" feature to encrypt removable drives (such as USB flash and external drives) connected to your computer. Enabling BitLocker To enable BitLocker on your device, follow these steps: Open Start. Your computer's hard drive should have two partitions, including a system partition with the files needed to boot the system and a partition with Windows 10 installation. Simply put, encryption is the process of making any data unreadable without proper authorization. Back up the recovery key: If you lose the recovery key and are still logged in to your account, you can use this option to create a new backup of the key with the options mentioned in step 6. Source: Windows Central Select the option to save recovery key: Save to your Microsoft account. BitLocker is available without TPM using software-based encryption, but requires some extra steps for additional authentication. You can always recover the encryption key in this OneDrive location. The computer firmware must support TPM or USB devices during boot. Disable BitLocker: Decrypt all files on the drive. Click System and Security. If you have never used BitLocker, the feature offers two ne ne eqnarra le noc raunitnoc y dadinu al raficsed arap BSU hsalF dadinu anu o a±Aesartnoc anu etnaidem erawtfos ne odasab odarfic le y JMPI(aruges amrofataIp ed olud²AM led pilhc le etnaidem erawdrah ne odasab odarfic le odlucni ,odarfic ed 10. Find Control Panel and click the top result to open the application³. In addition, partitions on the hard disk must be formatted with the NTFS file system. Browse to Device Manager and click the above result to open the application³ Source: Windows Central Quick Note: The TPM³ must be version 1.2³ or later to support BitLocker. After you complete the steps, you can configure BitLocker on your computer to protect your data. Create a password to unlock the drive. Confirm the item that says "³ secure platform dulo" with version number³ n. Windows 10 Resources For the most useful articles, coverage, and answers to common questions about Windows 10, visit the following resources: How³ enable BitLocker on fixed data drives To configure BitLocker on a secondary drive, follow these steps: Open Start. Source: Windows Central Click the button³ Continue. How³ Disable BitLocker on Windows 10 To remove drive encryption, follow these steps: Open Start. Although the device will start quite quickly, in Control Panel > System and Security > BitLocker Drive Encryption, note that BitLocker continues to encrypt the drive. Create and confirm the password to unlock BitLocker and access the device. Click the botÅ³ Start encryption. The Trusted Platform Module (TPM) chip is required for best results. Source: Windows Central Select the option³ n Enabled. When encryption is used, always try to start with a vacÅa drive to speed up the process.³ the data will be encrypted quickly and automatically. Source: Windows Central Click Next to continue. After completing the steps, the device will reboot, BitLocker will be enabled, and you will not be prompted to enter a decryption password to continue booting Windows Depending on the option you have selected and the size of the unit, this process may take a long time, but you can continue working on the computer. Click BitLocker drive encryption. Keep the equipment connected with an uninterrupted uninterrupted feeding source throughout the process. It is always recommended that you complete a full backup of your system before continuing with this guide. BitLocker is a long-standing feature that provides a way to encrypt data on your hard disk to prevent unauthorized access to information³ Source: Windows Central In the section³ "BitLocker To Go", select the extraAble drive that you want to encrypt. Source: Windows Central Create and confirm the password to unlock BitLocker and access the device. Print recovery³. Source: Windows Central Click the³ n Apply button. Source: Windows Central Choose between the two encryption options: New encryption mode (better for fixed drives on this device). Click on the bot³ on OK. Source: Windows Central Select how much drive space you want to encrypt: Encrypt³ used disk space (faster and better for new PCs and drives). Remove sensitive data remains secure. Change password: Creates a new encryption password, but you must provide the current password to make the change. However, you can still use encryption by using the Local Group Policy Editor to enable additional authentication³ startup. Source: Windows Central Check the option³ Use a password to unlock the drive. Select how much drive space you want to encrypt: Encrypt³ used disk space (faster and better for new PCs and drives). Once you complete the steps, the decryption process, which will take some time to complete depending on the amount of data. After completing the steps, the computer will restart and BitLocker will ask you to type your Central Click the³ n Apply button. Source: Windows Central Choose between the two encryption options: New encryption mode (better for fixed drives on this device). Click on the bot³ on OK. Source: Windows Central Select how much drive space you want to encrypt: Encrypt³ used disk space (faster and better for new PCs and drives). Remove supports BitLocker encryption. Locate gpedit and click the above output to open the Local Group Policy Editor. After completing the steps, the encryption process will begin on the extraAble drive. Source: Windows Central Click the botÅ³ n Next. Click BitLocker Drive Encryption. Source: Windows Central Click on the button³ Close. If³ with the appropriate encryption key you can decrypt the data to be usable. When you use encryption to encrypt your data, it will still be unreadable even when you share it with others. Quick note: You can also use the option³ Use my smart card to unlock the drive, but this is not common. Source: Windows Central Quick Tip: In this case, the recommended³ option is compatibility mode. Once the encryption process is complete, the drive will include a lock icon and the readBiLocker label turned on. Normally, use this option³ when upgrading to a new version³ Windows 10, firmware or hardware. Windows 10 Home Edition has its version³ BitLocker on certain devices. If the feature is not available, check with the computer manufacturer for an update³ the Entry Output System (BIOS) or Extensible Firmware Unified Interface (UEFI). update³.
